SALES DASHBOARD ANALYSIS, ASSUMPTIONS & DERIVATIONS

Project Overview

This project presents an interactive **Sales Performance Dashboard** developed in Power BI to analyze revenue trends, customer behavior, regional performance, and yearly growth between **2011 and 2014**.
The dashboard enables stakeholders to monitor key sales metrics, identify high-performing regions and customers, and evaluate time-based performance patterns to support data-driven decision-making.

Objectives

- Track overall sales performance
- Analyze revenue by territory and year
- Identify top-performing customers
- Examine monthly sales trends and seasonality
- Enable filtering by Sales Type and Year

Key Features & Metrics

◆ KPI Summary Cards

- **Total Sales:** 123M
- **Total Orders:** 31K
- **Average Order Value:** 3.92K
- **Total Customers:** 19K

These KPIs provide a high-level executive overview of business performance.

◆ Sales by Territory

A horizontal bar chart highlights regional performance:

- Southwest leads with approximately 27M in sales.
- Canada and Northwest follow closely.
- Australia shows comparatively lower revenue.

This reveals geographic concentration and potential growth opportunities

Top 5 Sales by Customer

The dashboard identifies the highest revenue-generating customers.

- Customer 30117 contributes nearly 0.92M.
- Revenue shows partial concentration among top customers.

This insight supports customer retention and account management strategies.

Monthly Sales Trend

A line chart visualizes monthly performance patterns:

- Sales peak in March (~15M).
- Some fluctuations suggest seasonality and promotional impact.

This supports forecasting and promotional planning.

Yearly Sales Distribution

A donut chart illustrates revenue contribution by year:

- 2013 is the strongest year (~39.7% of total sales).
- Growth trend observed from 2011 to 2013.
- Slight decline in 2014 suggests potential market changes.

Technical Implementation

- Built using **Power BI**
- Custom **Date Table** created using DAX:
  - Year
  - Month Number
  - Month Name & Short Name
  - Quarter
  - Year-Month
- Time intelligence enabled via marked Date Table
- Measures created for:
  - Total Sales
  - Total Orders
  - Average Order Value
  - Distinct Customer Count
- Interactive slicers:
  - Sales Type
  - Year filter

Business Insights

- Revenue peaked in 2013, showing strong growth momentum.
- Sales are heavily driven by the Southwest territory.
- A small number of customers contribute significantly to total revenue.
- Monthly trends indicate seasonal fluctuations.

PRODUCT DASHBOARD ANALYSIS, ASSUMPTIONS & DERIVATIONS

Project Overview

The dashboard provides a consolidated view of product performance across:

- **504 Total Products**
- **4M Total Transaction Quantity**
- **27.31M Total Transaction Cost**
- **336K Total Inventory**

Transaction quantity (4M) is significantly higher than total inventory (336K), indicating strong product movement and healthy turnover.

Sales & Transaction Performance

Top 5 Products by Total Transaction Cost :
The highest transaction cost product generates approximately **1.3M**, with the remaining top four products ranging between **1.1M – 1.2M**.

📌 Derivation:

- A small number of products contribute disproportionately to total transaction cost.
- Revenue concentration suggests a **Pareto (80/20) effect**.
- Mountain bike variants dominate high-value transactions.

Business Implication:

The company relies heavily on premium bike models for cost generation.

Total Transaction Quantity by Product

1. BB Ball Bearing leads with ~0.37M units.
2. Seat Stays follows with ~0.19M units.
3. Other products show significantly lower volumes.

n

📌 Interpretation:

- High-quantity products are not necessarily high-cost products.
- Some products are volume-driven, others value-driven.

Inventory Analysis

Total Inventory: 336K Units
From the product inventory table:

- Some apparel items show moderate stock.
- Total inventory (336K) is much lower than total transaction volume (4M).

📌 Derivation:

Inventory turnover appears strong.

- Approximate Inventory Ratio = 8.4%

This suggests:

- Fast-moving products
- Efficient stock management
- Low overstock risk

Operational Insight – Cost Rate by Location

The treemap shows cost rates distributed across production locations.
Observations:

- Some locations have significantly higher cost rates.
- Cost variation across locations may impact overall margin.

📌 Business Implication:

- High-cost locations should be reviewed for efficiency improvements

Conclusion

The dashboard indicates:

- Efficient inventory turnover
- Concentrated cost generation in premium products
- Stable year-over-year performance
- Potential for cost optimization at certain locations
- Data cleanup needed for product classification
